

WINDI

VERIFY SYSTEM

How to Use — User Guide v1.0
05 March 2026 | Kempten, Bavaria

"AI processes. Human decides. WINDI guarantees."

1. What is WINDI Verify?

WINDI Verify is the public authenticity layer of the WINDI Publishing House ecosystem. It allows anyone — with or without a WINDI account — to confirm whether a document is genuine, unaltered, and officially registered in the WINDI Forensic Ledger.

Every document produced through WINDI receives a unique cryptographic fingerprint (SHA-256 hash) that is permanently recorded in the Ledger. Verify reads this fingerprint and returns an immediate, unambiguous result.

2. What You Can Verify

WINDI Verify works with any document that has been sealed through the WINDI pipeline.

2.1 Verification Methods

Method	How it works
QR Code Scan	Every WINDI document contains a QR code in its footer. Scan it with any QR reader — it links directly to the verification page for that document.
File Upload	Upload the PDF or document file directly. The Verify system extracts the hash automatically and checks it against the Ledger.
Document ID	Every sealed document has a WINDI serial number (e.g. WINDI-2026-0001). Enter it manually in the ID field.
Direct URL	Each document has a unique verification URL. Anyone with the link can verify instantly, no upload required.

3. Step-by-Step: Verifying a Document

3.1 Via QR Code

#	Action	Detail
1	Locate the QR code	Found in the document footer, next to the WINDI Seal Badge.
2	Scan with any device	Use your phone camera or any QR reader app. No WINDI account needed.
3	Browser opens automatically	You are taken directly to <code>windi-domain.com/verify/{document-hash}</code>
4	Read the result	The system returns VERIFIED or NOT FOUND within seconds.

3.2 Via File Upload

1	Open Verify Public	Navigate to <code>windi-domain.com/verify-public/</code>
2	Select Upload tab	Click the upload area or drag and drop your document file.
3	Wait for analysis	The system extracts the SHA-256 hash from your document automatically.
4	Read the result	VERIFIED if the document is in the Ledger. NOT FOUND if unregistered.

3.3 Via Document ID

1	Locate the Document ID	Format: WINDI-YYYY-NNNN — found in the document header or Seal Badge.
2	Open Verify Public	Navigate to <code>windi-domain.com/verify-public/</code>
3	Select ID tab	Enter the Document ID in the search field.
4	Read the result	Full record displayed: date, hash, issuer, status.

4. Understanding Verification Results

✓ VERIFIED	The document is authentic. It was sealed by WINDI, its content has not been altered, and the record exists in the Forensic Ledger. This is the highest level of authenticity WINDI can confirm.
------------	---

**X NOT
FOUND**

The document is not registered in the WINDI Ledger. This may mean it was not produced through WINDI, it was altered after sealing, or it is a counterfeit.

△ ANALYSIS

The system detected cryptographic elements (hash, QR, signature) but no WINDI registration. The document may use another verification system.

A VERIFIED result does not validate the legal content of a document. It confirms that the document was sealed at a specific point in time and has not been altered since.

5. The Verify Button in Correspondence

Every document sent through WINDI email delivery includes a Verify button in the footer. Recipients do not need a WINDI account — a single click confirms authenticity instantly.

5.1 What Recipients See

```
This document has been cryptographically sealed by WINDI.  
[ VERIFY AUTHENTICITY → windi-domain.com/verify/3f9c... ]  
Sealed: 05.03.2026 · Serial: WINDI-2026-0001 · I11 ACTIVE
```

The Verify button is the primary trust interface. It transforms every document into an ambassador for the WINDI governance system.

6. Privacy & Data Policy

WINDI Verify operates under the following constitutional principles:

- No document content is stored. Only the cryptographic hash is recorded in the Ledger.
- Verification requests are not logged against user identity.
- The Verify Public interface requires no login and no personal data.
- Invariant I11 (Public Verifiability) guarantees this interface remains publicly accessible, permanently.
- All data processing complies with GDPR and EU AI Act requirements.

7. Constitutional Guarantee — Invariant I11

Invariant I11 is an irremediable constitutional rule of the WINDI system:

"Every sealed document must be publicly verifiable. Forever."

This means WINDI cannot — by design — make a verified document unverifiable. The public Verify interface is a permanent, non-negotiable feature of the WINDI infrastructure.

I11 was sealed on 05 March 2026. Genesis Record: WINDI-I11-CONSTITUTIONAL-20260305.

8. Quick Reference

Verify Public URL	windi-domain.com/verify-public/
Direct verify URL format	windi-domain.com/verify/{hash}
Document ID format	WINDI-YYYY-NNNN
Port (internal)	:8114
API endpoint	/api/verify/{id}
Ledger API	/api/receipts/
Constitutional basis	I11 – Public Verifiability (IRREMEDIABLE)
Genesis record	WINDI-VERIFY-GENESIS-20260305
