

WINDI-HIOS · Evidence Discovery Surface

Analyst visit handout — machine + human readability

Status: VISIT HANDOUT · NOT CANONICAL · NOT SEALED

Source note: the public /llms.txt surface observed for preparation still identified itself as CANDIDATE v1.1 (2026-09-01). This handout therefore does not claim to be a byte-identical print of the newly reported v2.0. It combines the publicly observed doctrine with the v2.0 elements reported by CCode: Language Policy, Rule Zero, epistemic tokens and Semantic Ceiling.

1 · What this surface is for

A public orientation layer that makes WINDI-HIOS interrogable by both machines and technical humans. Its purpose is not to certify truth; it is to expose what can be discovered, what evidence supports a claim, and where the proof boundary ends.

Discover ≠ Demonstrate ≠ Infer ≠ Prove.

2 · Core operating model

AI / software	Human	WINDI-HIOS	Third party
prepare · classify · explain	review · decide · approve	record evidence boundary	verify independently

3 · Rule Zero

An AI may discover freely. It may infer explicitly. It may claim only what evidence supports.

For regulated environments, the practical consequence is simple: endpoint discovery, documentation, or a design note must not be silently promoted into a demonstrated production capability.

4 · Epistemic tokens

Token	Meaning for review
DEMONSTRATED	Observed/tested behavior supported by evidence
DOCUMENTED	Specified or described; runtime behavior not necessarily shown
INFERRED	Reasonable interpretation, explicitly labeled as inference
HYPOTHETICAL	Possible use or design; not demonstrated

5 · Semantic ceiling of a receipt

A WINDI receipt can record	A WINDI receipt does not by itself prove
SHA-256 hash calculated locally	truth or correctness of document content
registration timestamp	original authorship
declared actor identifier / DID	pre-registration history
the fact of a recorded approval event	legal validity, notarization or professional authority
a verification path	that the human read or understood the content

6 · Human analyst challenge

Read this surface as if you had inherited an unfamiliar banking system. Then answer:

What do you believe exists? What is actually demonstrated? What would you refuse to accept without additional evidence?
