

Receipt Demonstration Package · Pre-Seal Candidate

Prepared for the banking analyst visit

CRITICAL: THIS IS NOT A WINDI RECEIPT · NOT SEALED · NO RECEIPT ID HAS BEEN INVENTED

The purpose of this package is to prepare the neutral source document and local integrity baseline. The Human Dragon may later perform the real WINDI sealing act using the actual system.

Demo source document

WINDI-HIOS BANKING ANALYST DEMO DOCUMENT

Purpose: neutral fictitious document for integrity demonstration.

Date prepared: 2026-09-06

Classification: DEMO / NO CUSTOMER DATA / NO BANK DATA

Statement:

A technical reviewer is asked to inspect how WINDI-HIOS separates document integrity evidence, human approval, and external verification. This document contains no operational banking instruction and no claim of legal or regulatory validity.

Expected demonstration path:

1. Calculate the file hash locally.
2. Human Dragon reviews and, if desired, performs the real WINDI sealing act.
3. WINDI issues the actual receipt.
4. The reviewer verifies the resulting receipt through Verify Public.

This preparation document is NOT itself a WINDI receipt and is NOT sealed.

Local preparation hash

SHA-256 of the UTF-8 demo text prepared in this package:

a1ac418df9afc642f4c6fc77c1ef461f157d9b798df258b12f0a30b5be29dfb0

This hash is a local preparation checksum only. It is not evidence that a WINDI receipt exists.

Tomorrow's live path

Step	Action	Evidence to show
1	Open the exact demo source file	File bytes / local hash
2	Human Dragon reviews and explicitly approves	Human decision
3	Use the real WINDI sealing path	Actual WINDI receipt returned by system
4	Open Verify Public	Third-party verification without relying on presenter
5	Ask analyst what the receipt proves	Human technical interpretation / objections

Fields to fill only after the real sealing act

Receipt ID	_____
Ledger timestamp	_____
Actor / DID	_____
Content hash returned by WINDI	_____
Verify Public result	FOUND / NOT_FOUND / UNAVAILABLE
Analyst observation	_____

Do not pre-fill any receipt ID, seal state, or verification result. Those fields become evidence only after the real system produces them.
