

External Banking Systems Analyst - Review Sheet

Use during the WINDI-HIOS walkthrough — observations before conclusions

Instruction to reviewer: write what you observe, not what you think WINDI “must” do. Separate demonstrated behavior from application ideas.

VEJO VALOR	TENHO DÚVIDA	VEJO RISCO	TESTARIA ISTO PRIMEIRO

Questions for the analyst

1. If you inherited this as an unknown banking system, what would you say exists, what is demonstrated, and what remains only documented or inferred?

2. Which additional epistemic states would you require in a bank (e.g. owner, environment, control status, evidence freshness, independence, exception, residual risk)?

3. Which piece of evidence would you distrust first, and why?

4. Where should segregation of duties appear in this architecture?

5. What would you require to connect a receipt to identity, authorization and professional competence without conflating them?

6. Which capability should be read-only first if WINDI were integrated into a bank?

7. Which existing banking system would WINDI most naturally complement rather than replace?

8. What is the smallest pilot you would allow in a real institution?

9. What would prevent this architecture from passing a bank security / architecture review?

10. Which claim in the presentation would you force us to rewrite more narrowly?

Classification discipline after the meeting

If the analyst suggests a use: DOMAIN EXPERT INFERENCE. If they identify an integration to test: BANKING PILOT CANDIDATE. If they find a weakness: EXPERT OBSERVATION - REQUIRES INVESTIGATION. Do not silently promote any of these to demonstrated capability.
